

13 May 2008

The Honourable Ian Macdonald MLC
 Minister for Primary Industries
 Level 33
 Governor Macquarie Tower
 1 Farrer Place
 Sydney
 NSW 2000

Dear Minister,

Forest Productivity, Woodchipping & Royalty Rates

You may recall your comments in Parliament on 29 May 2007 when you referred to chipping as thinning of a forest to improve its productivity.

Figures from 98/99 to 06/07 show differently:

- 1) Forest productivity has fallen substantially
- 2) The area being logged has risen significantly - but the output of large sawlogs has fallen in Eden and has remained relatively constant in South Coast-Southern and Tumut.
- 3) Royalty rates for pulp have fallen substantially - they are significantly less now than what they were in 92/93. If inflation is taken into account, the 06/07 average rate for Eden and the overall average for 'South Coast' are about half of what they were in 92/93.

This situation is not a sustainable business strategy.

Conflict With Forests NSW Corporate Business Strategy

The strategy is to maximise forest productivity, reduce costs and drive pricing policy by value and supply of the product.

For the Southern RFA region Native Forests this appears to have been implemented by increasing the amount of pulp from South Coast-Southern and Tumut-Southern. For Eden region the amount of pulp has also increased. However, the area logged has increased and forest productivity has fallen. The average price for pulp for 'South Coast' (average of Eden, SC-Southern & Tumut) in 06/07 was about half of what it was in 92/93 in real terms. **See page 4.**

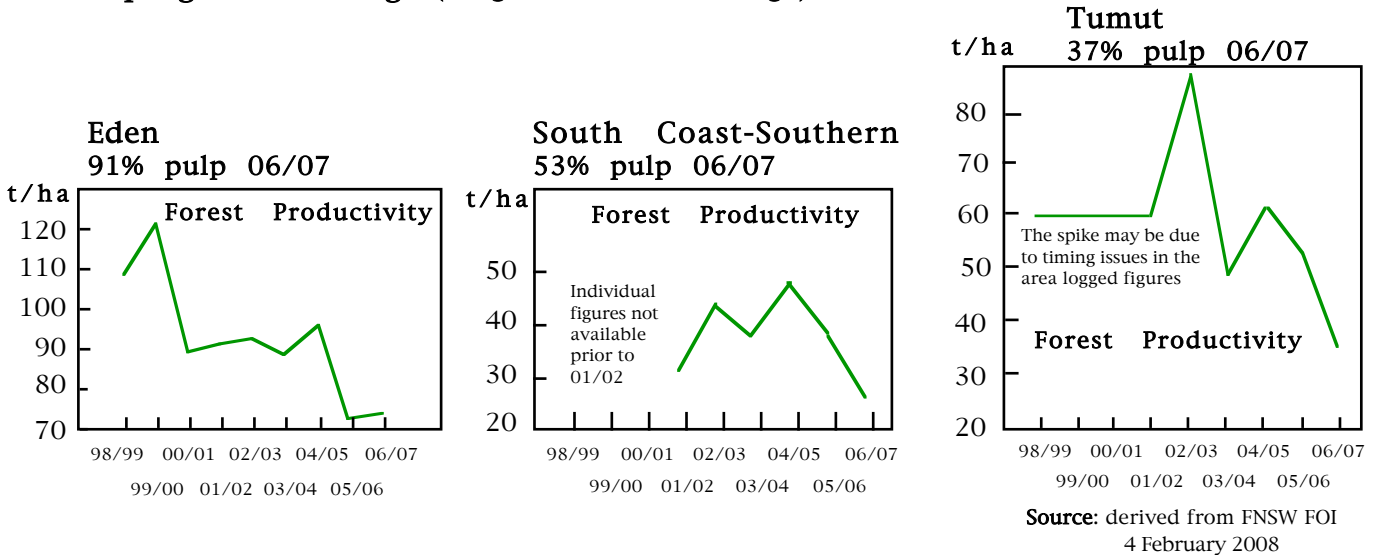

In South Coast-Southern the amount of pulp has risen substantially since 04/05 to 53.5%% of output but yield has fallen. Yield should have risen because of the much higher pulp yield/ha compared to sawlogs.

There is a need to reassess the policy of woodchipping and to redeploy the resources used on this activity on productive pursuits.

1) Forest Productivity

Productivity per hectare has fallen substantially in Eden, South Coast-Southern & Tumut - despite large increases in the supply of pulp from SC-Southern & Tumut.

Forest Productivity per hectare: 98/99 - 06/07, tonnes/ha Pulplogs & Sawlogs (Large + Small + Salvage)

2A) Area Logged: 98/99 - 06/07, hectares

The area logged has risen significantly in Eden, South Coast-Southern & Tumut.

Pulp has risen 15% since 04/05.

Pulp has risen 68% since 04/05.

There was a significant increase in the amount of pulp in 06/07.

The increase in the area logged means that the time period of the cutting cycle is falling. Eden is about 25 years, SC-Southern less than 20 years.

2B) Forest Output: 98/99 - 06/07, tonnes

It is often said that chipping allows for more sawlogs to be produced, because chipping is simply thinning of the forest.

This hasn't happened in practice. Large sawlogs have fallen in Eden since 98/99. In SC-Southern there has been a slight downward trend in large sawlogs since 02/03. The trend level is relatively constant. In Tumut large sawlogs have seesawed around a relatively constant trend level.

If chipping really did allow for more sawlogs to be produced there would not need to be such large increases in the area logged.

Eden - sawlogs

Large
37% fall since 98/99

Small + salvage
steady fall since 03/04
overall, up & down

SC-Sth'n - sawlogs

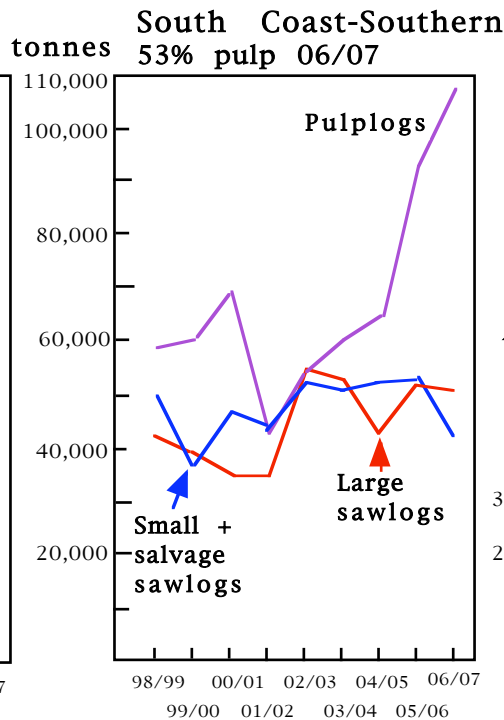

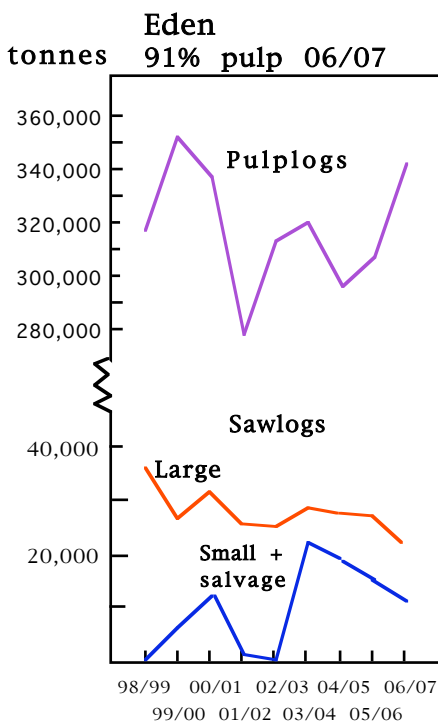

Large
slight down trend since 02/03
Trend level fairly constant

small + salvage
relatively constant trend level

Tumut - sawlogs

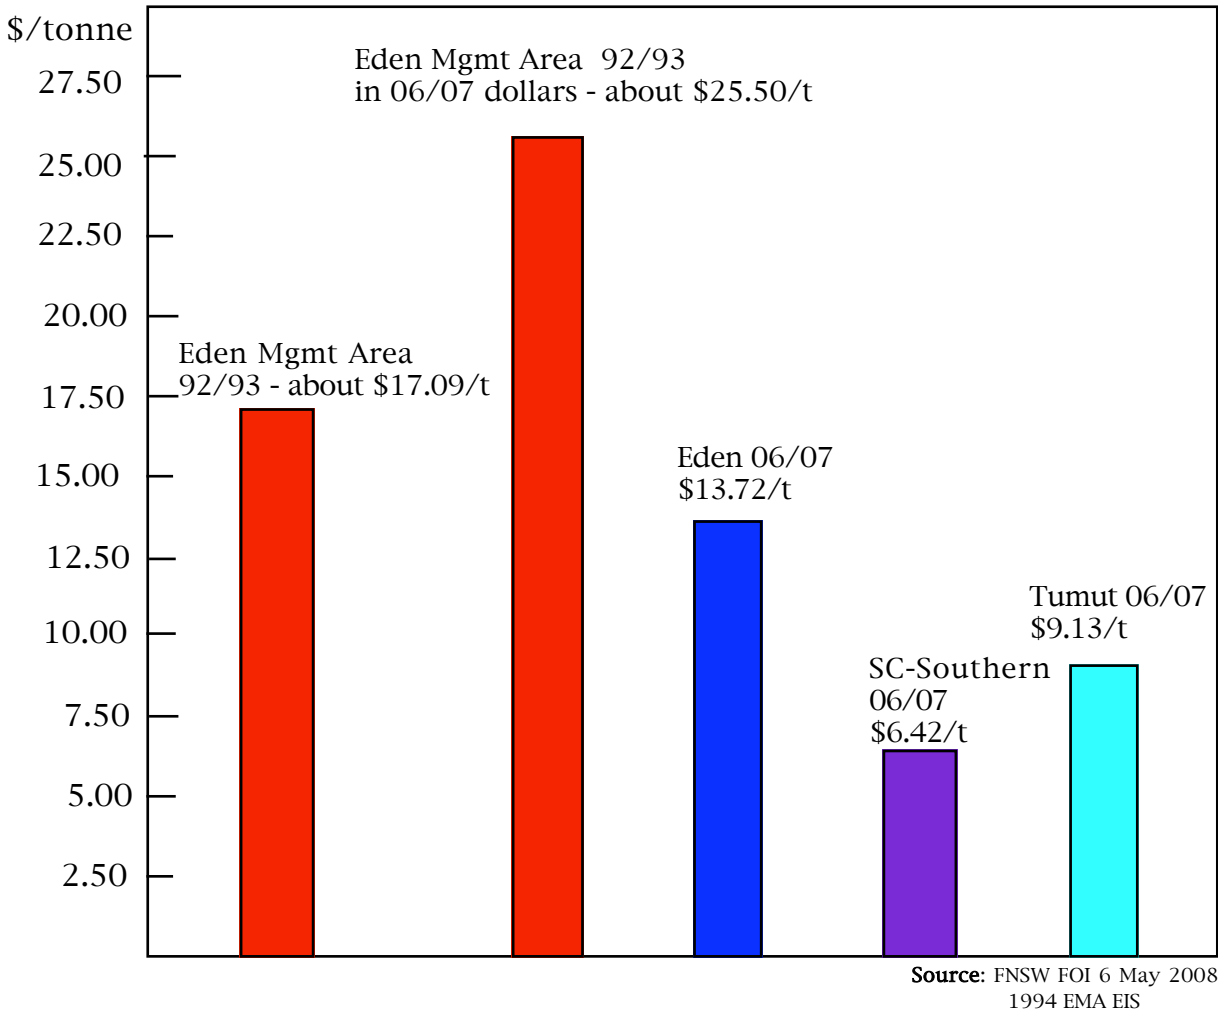

Large
seesaw round trend level

small + salvage
trend down since 02/03
fairly constant trend level

4 Feb 2008, 29 Oct 2007,
17 May 07

3) Pulp Royalty Rates

If inflation is taken into account, the 06/07 rate for Eden is about half the 92/93 rate (using GDP deflator for State & Local gov't final consumption exp. ABS 520408.)

The average rate - Eden, SC-Southern & Tumut - for 06/07 was \$11.91/tonne. (Source: FNSW FOI 29 Oct 07)

This compares to the estimated average rate for Eden and South Coast-Southern of about \$15.60/tonne in 92/93 (based on information in the 1994 EIS). Brought forward to 06/07 that \$15.60 is about \$23.28, (using GDP deflator). The \$11.91 is about half of that figure.

NSW Input into Eden Chipmill - tonnes

Eden	342,914	72.5%
SC-Southern	107,370	22.7%
Tumut	22,083	4.7%
Sub total	472,367	

About 27% of the input is at lower royalty rates

NSW sawmill chips - about 31,200 tonnes

The details of the figures in this letter are contained in the Appendices.

Yours faithfully,

Area Harvested (ha)	5211			3794	3710	4363	3361	5095	7618

Tumut Subregion									
Financial Year	07/1998 to 06/2001			2001/02	2002/03	2003/04	2004/05	2005/06	2006/07
Area Harvested (ha)	2041			394	718	1110	651	828	1727

Notes:

1. Blue text indicates values previously supplied
2. 1998 to 2001 areas for SC and Tumut sub-Regions are sums of areas harvesting during this time period, no financial year breakdown is available. In SC many areas were not completed and carried forward into subsequent years.

Appendix 2: Adjustments to FOI Figures

- 1) Cubic metres converted to tonnes using 1.17
- 2) Tumut sawlog transfers into Eden averaged & removed from Eden figures
graded sawlogs assumed to be mainly large.
- 3) Tumut sawlog transfers into Eden averaged & added to Tumut figures
- 4) SC-Southern transfers into Eden not adjusted - as already included in SC-Southern
- 5) I did not adjust the area harvested figures for 2 reasons:
 - i) I had asked for them to be supplied on an adjusted basis.
 - ii) The pulp transfers from Tumut into Eden had been shown as a separate item
in another FOI response rather than being included in the Eden figures.
